Subject: SteamPro project feedback

Dear Ms Tan,

We have had the SteamPro traps in service for 3 months now and the condensate recovery units for about a month at SSMT. Both the SteamPro CRD & CRU System has been installed in our entire SSMT plant. From this limited time, we find the SteamPro devices to perform satisfactorily and meet our expectations.

We would like to acknowledge SteamPro for having a capable & dedicated technical team who had showed great sense of responsibility and commitment before, during and after installation at SSMT with a timely delivery and complying with our strict safety requirement and housekeeping.

In order to achieve immediate savings at SSCT, we request that SteamPro standby and get ready for SSCT's SteamPro Project which will require CRDs, CRUs and parts & material. This project is pending upper management approval and once approved, we will issue the PO to you and we expect SteamPro to start mobilisation and able to install immediately for SSCT.

As we have done for our double former dipping lines, we have specified that all future new production lines to come with SteamPro's CRDs. We therefore expect you to work closely with our dipping line suppliers to deliver the same quality as installed in SSMT with the appropriate size SteamPro CRDs.

Thank you for your cooperation.

SH Tan
